GEA Refrigeration Technologies: Your partner for low temperatures

GEA Refrigeration Technologies, part of the internationally active GEA Group, is a synonym for industrial refrigeration technology. Since the end of the 19th century, it has been our business to cool processes and products, and to control the temperature of goods in transport.

You will find our solutions in the food and beverage sector; in the petrochemical, chemical, and pharmaceutical industries; on fishing ships; in natural gas liquefaction; in infrastructure facilities; and in ice factories. We are also at the top with know-how when it comes to refrigeration at leisure facilities. After all, we have been excited about refrigeration for decades now. As a result, our staff enthusiastically goes about its development and production projects – to include preventive and remedial maintenance of your refrigeration systems.

This enthusiasm is highly apparent in the daily work of all companies in our Segment. Whether it's complete systems or individual valves: we have the experience in every section of our company to optimally design, manufacture, and install refrigeration systems. And to take full advantage of this experience, we not only carry out development in our own company: we also manufacture, assemble, and test the core components. A chain is, after all, only as strong as its weakest link: and this also applies equally well to refrigeration technology, cooling processes, and cooling chains.

This makes it all the more important that you have a partner – in GEA Refrigeration Technologies – that has learned to master refrigeration from A to Z. And all of this since 1896, when Willem Grasso founded his refrigeration division. From this history of GEA Refrigeration Technologies, you will profit in the form of technical expertise and top sector know-how.

But we all live in the present and think about the future. We ponder a future in which more and more processes need energy around the world, and fewer natural resources are available. As a result, we have taken it as our goal to create solutions that are not only long-life and cost-effective, but also energy-saving and environment-protecting. We feel obligated to sustainability in many respects. Our objective is to produce longlife and material-saving products over the long run – as well as products that use environmentally benign refrigerants. And we aim to produce efficiently. But our responsibility does not end at the factory gate. As a result, we take great pains to ensure that our systems are energy-efficient and that they protect the climate. With GEA Refrigeration Technologies, you can also count on optimal economy: saving energy indeed means reducing money spent for energy. At the same time, you protect the environment. Thanks to our refrigeration technology, your processes will run more economically and more ecologically. To maintain our standard of living and to assure quality of life for future generations as well. Our claim of combining economy with saving natural resources is reflected in all components of our company, such as the following: compressors, chillers, heat pumps, ice machines, fittings and valves, control systems, and many, many more. You can find proof of the above throughout the world. Our international corporate network – and above all our reference projects – are spread all over the globe.

GEA Bock - More than a compressor

Over 80 years ago, when the refrigeration and air-conditioning industry was still in its infancy, our company's founder, Wilhelm Bock, had a vision: he wanted to build first-class and reliable refrigeration machines. In the following decades Bock developed into one of the world's leading manufacturers of refrigeration and air-conditioning compressors.

As part of the GEA Group AG, GEA Bock offers the right compressor for refrigeration and air conditioning in all commercial, industrial, rail, bus and transport sectors.

In this brochure we present you our program semi-hermetic compressors and condensing units.

Be inspired. By our new products, our established product series and the entire passion that goes into each of our products.

Semi-hermetic compressors HG (HA)

The GEA Bock HG (Hermetic Gas-cooled) range of semi-hermetic compressors offers traditional suction gas-cooled compressor state of the art technology. These compressors of the highest quality standard excel in their running comfort, easy maintenance, efficiency and reliability. Suitable as standard for conventional or chlorine-free HFC refrigerants. The HA (Hermetic Air-cooled) range, specially engineered by GEA Bock, is available for deep-freezing applications, in particular for use with the refrigerants R22 and R404A.

- Single-stage
- CO₂ compressors subcritical
- CO₂ compressors transcritical
- R134a compressors
- R407C compressor
- ATEX compressors
- HC compressors
- Aluminium compressors
- 2-pole compressors
- Two-stage compressors
- Duplex compressors
- Compressor units with receiver
- Condenser units air-cooled

Vehicle compressors FK

GEA Bock vehicle compressors of the FK range are the result of many years of experience in the domain of mobile cooling systems.

The unsurpassed light, compact, robust design and wide r.p.m. range are only some of the outstanding features of this unique product range of two, four and six cylinder compressors.

A wide variety of designs can be tailored to suit individual requirements.

The so-called K version is a special innovation with a unique valve plate system for maximum requirements in bus and coach air-conditioning systems.

- Compressors for bus and train air-conditioning
- Compressors for transport refrigeration and other applications

Open Typee compressors F

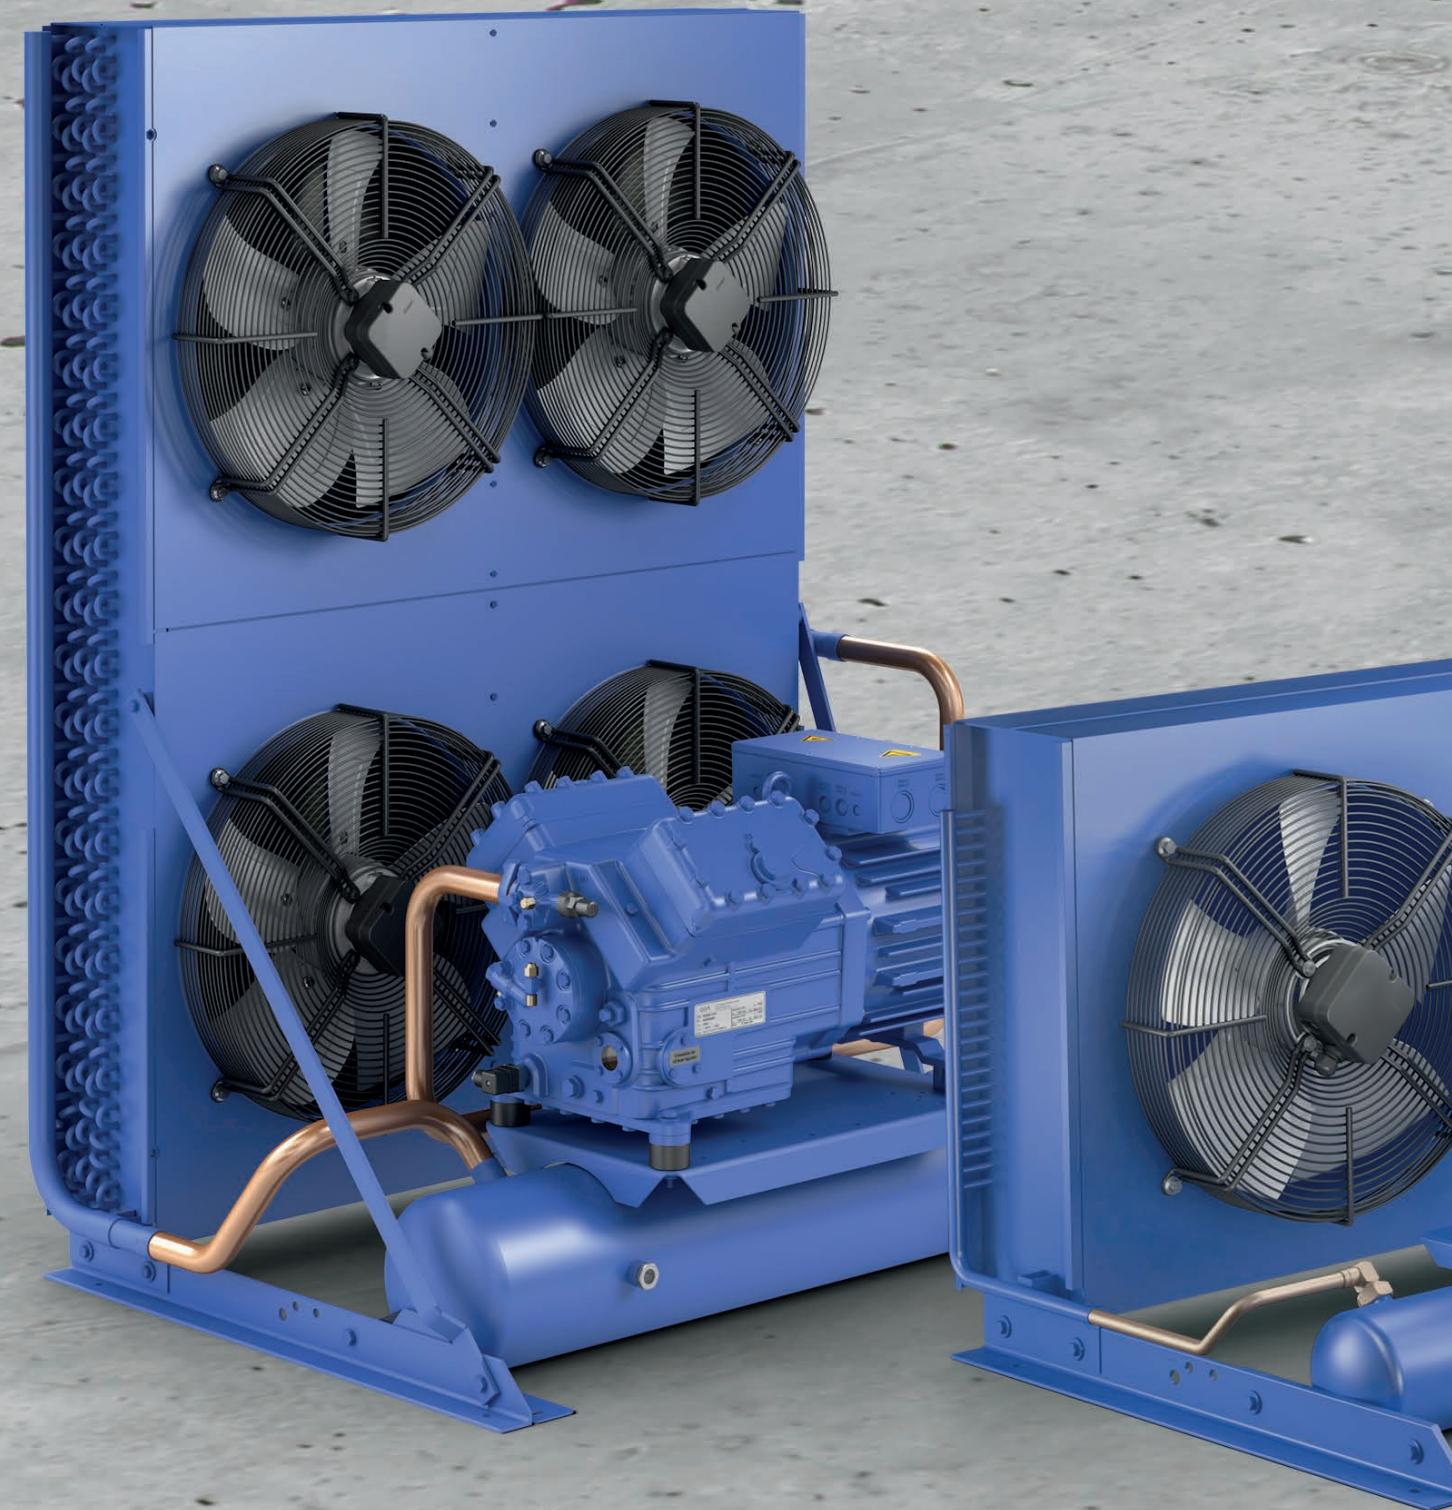

The F model series provides modern open Typee compressors for separate drive systems (using V belts or direct couplings). The power transmission occurs via an elastic flexible shaft coupling.

Virtually all drive capacity requirements can be met.

Very compact compressor design, robust and easy to handle. Oil pump lubrication as standard.

- F compressors
- F NH₃ compressors
- Compressor units for direct drive
- NH₃ compressor units for direct drive

Condenser units air-cooled

With the current series of units, GEA Bock offers you a comprehensive range from 5,4 to 122,4 m³/h displacement.

In the lower and medium capacity range, the compressors of the Pluscom generation come into use.

All GEA Bock units are constructed following a continuous "module" principle.

Models for higher ambient temperatures can be individually assembled on request.

References to performance data:

The stated performance data is based on 20°C (25°C) suction gas temperature with liquid subcooling at 50 Hz.

The performance data of R404A and R507 have been combined.

The R404A data provides basic values.

Conversion factor for 60 Hz = 1,2

For performance data of other operating conditions, please refer to the GEA Bock software.

With frequency converter operation (infinite speed/output regulation via frequency converters), the max. possible frequency can be taken from the GEA Bock software.

Special features:

Universal

Wide range of uses (R134a, R407C, R 404A, R507, R22) for air-conditioning, medium and low temperature refrigeration applications

Two compressor variants

- HG design with suction gas-cooling
- HA design with air-cooling, particularly advantageous for low temperature applications (R404A, R22)

Reliable and safe oil supply

All compressors are fitted with classic lubrication oil circulation and an oil pump which is independent of the direction of rotation

High refrigeration capacity with reduced energy consumption

Generously proportioned condensers with optimized tube circulations and heat transmission linked to high-performance fans

Efficient fans

Fans with highly efficient shovel fluting, motor in compact external rotor design, single-phase (230V -1- 50/60Hz) with winding protection. Motor suitable for electronic speed regulation for optimal condensation pressure setting

Explanations:

① Further explanations and technical data see brochure

"semi-hermetic GEA Bock compressors"

④ 380-420 V Y/YY - 3 - 50 Hz PW

PW = Part Winding, motors for part winding start
(no start unloaders required)

- Winding ratio: SHG(SHA)4 = 66% / 33%
- Designs for Y/Δ on request

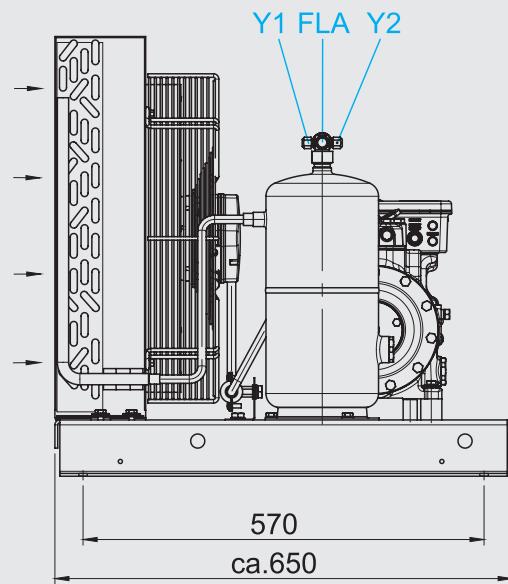

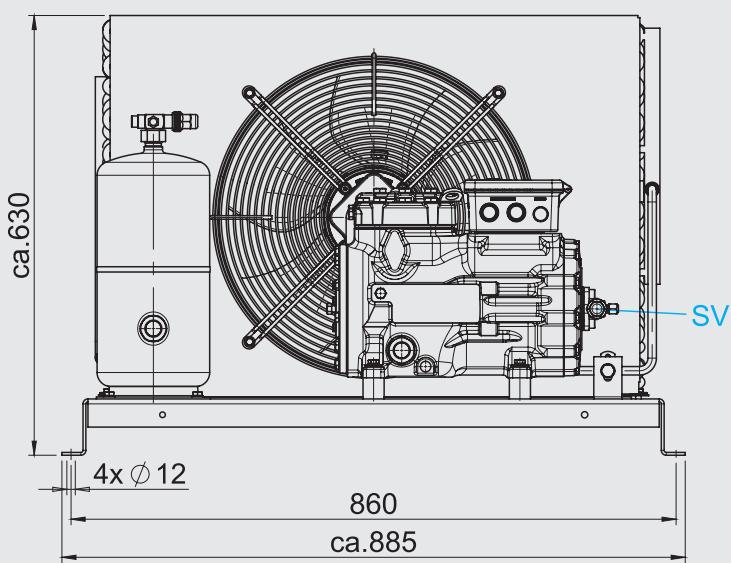

③ 220-240 V Δ / 380-420 V Y - 3 - 50 Hz

⑤ 230 V - 1 - 50 Hz

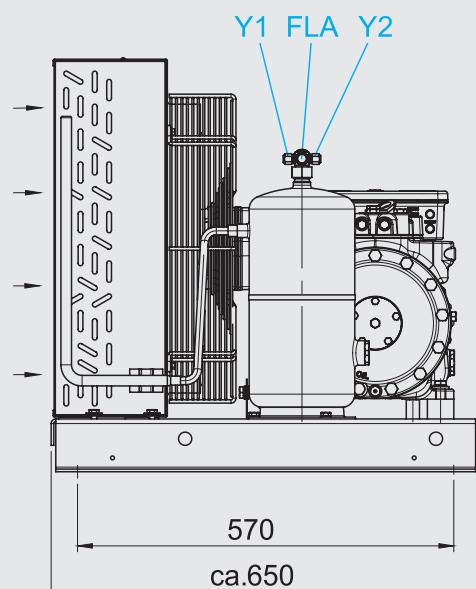

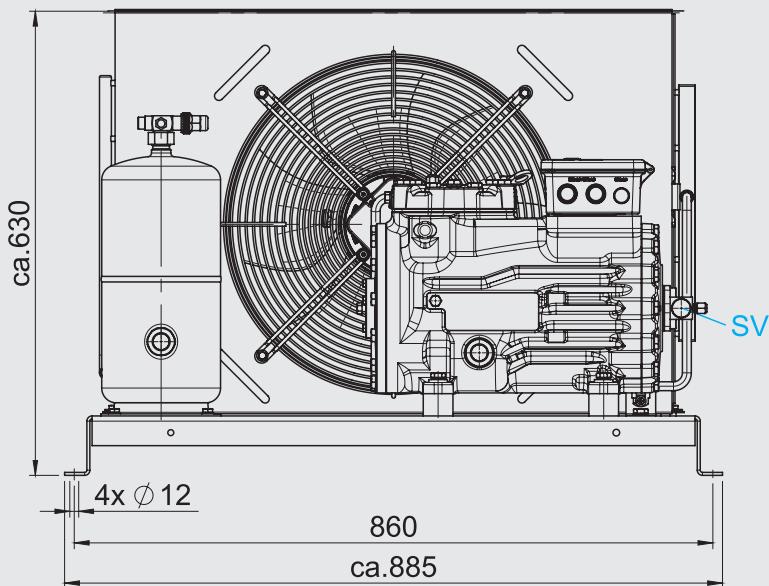

Condenser units air-cooled single-stage

① Further compressor connections can be found in the brochure "semi-hermetic GEA Bock compressors"

Scope of supply

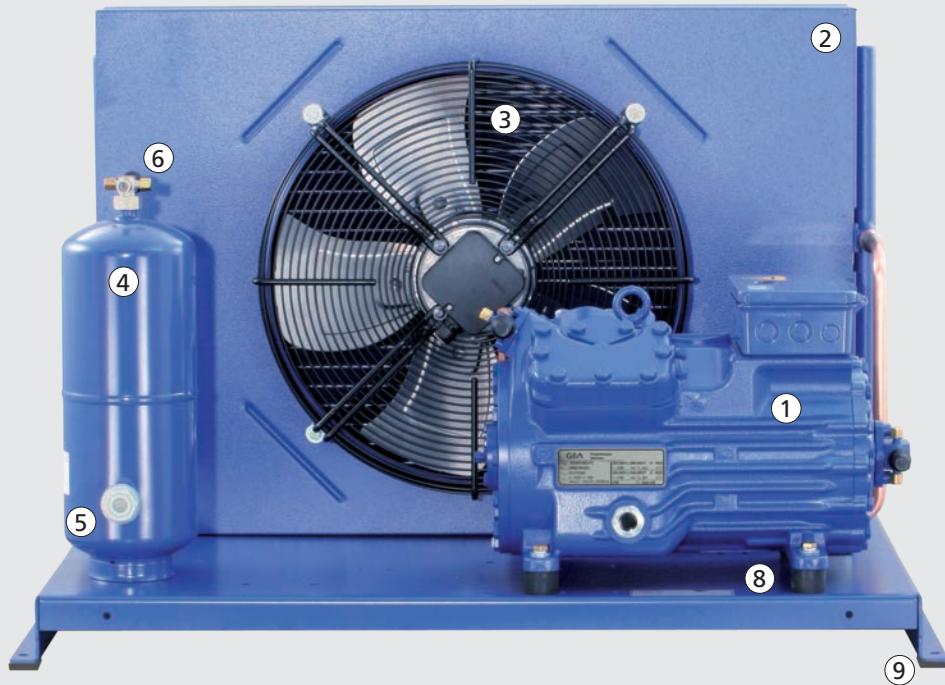

- ① Semi-hermetic GEA Bock compressors
HG with suction gas-cooling or
HA with air-cooling (deep-freezing R22, R404A)
- ② Condensers with copper pipes and aluminium plates,
optimized circulation, improved heat transmissions and extended plate surfaces
- ③ Fan with exceptionally quiet and economical external rotor motor single-phase, suitable for speed regulation
- ④ Generously proportioned liquid receiver (tested for type examination from 14 ltr.)
- ⑤ Sight glass with spherical insert
- ⑥ Liquid outlet - Rotalock shut-off valve with adjustable spindle seal, brazed adapter and connections
for speed control and service
- ⑦ Stable attachment for discharge line (no picture)
- ⑧ Rubber anti-vibration pads
- ⑨ Rubber plates for installation of the unit

Scope of supply

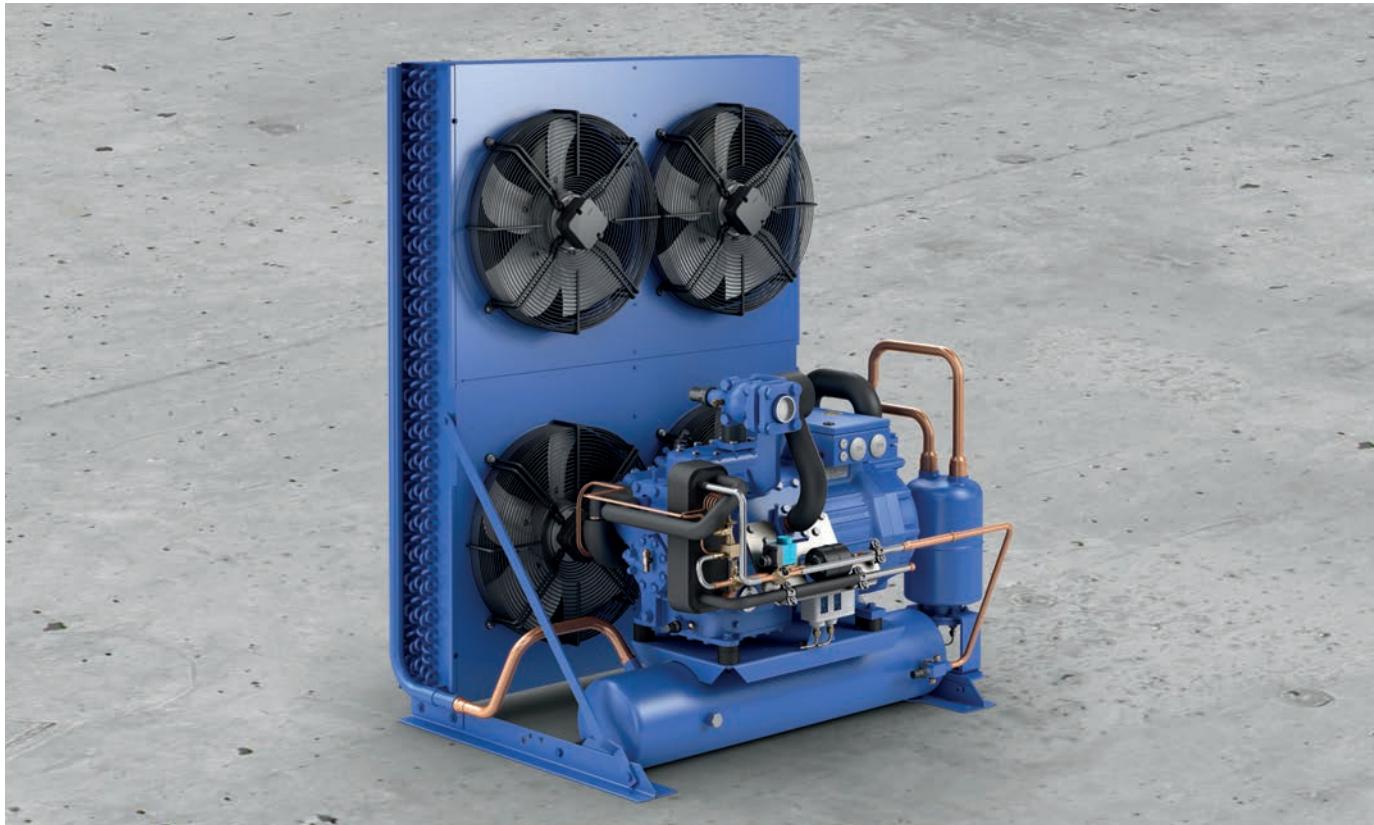

Accessories

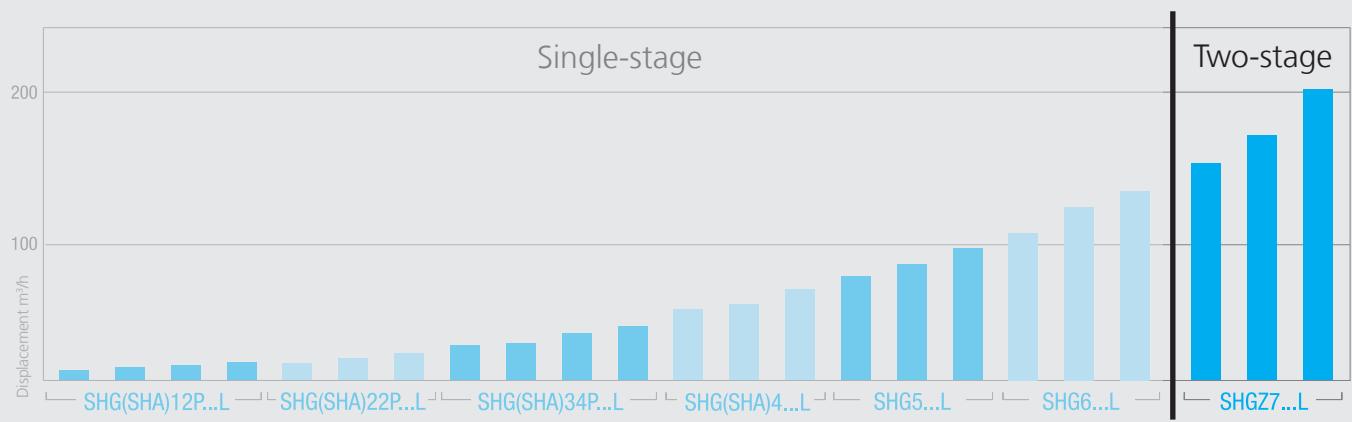

- (1) Weather-proof casing
 - Simple assembly on site thanks to assembly-friendly connection technology
 - Also suitable for noise-reduced operation
 - Available for all units with one fan
- (2) High and low pressure switch (mounted)
- (3) Oil separator
- (4) Progressively adjustable speed control by means of a EFC (Electronic Frequency Control), compactly built onto compressor and connected ready-to-operate
 HG12P: IP65 HG22e/HG34e: IP54
- (5) Instrument panel with gauges for high, low and oil pressure incl. mounting (for SHG4-6 L, no picture), not for HG12P-34e
- (6) Safety valve for receiver (from 14 ltr.) (mounted) (no picture)
- (7) Speed regulation available for all units with one fan (no picture)

Further accessories can be found in the brochure
 "semi-hermetic GEA Bock compressors".

References to performance data

The stated performance data are based for **SHGZ7 on 10 K suction gas superheat with liquid subcooling at 50 Hz.**

The performance data of R404A and R507 have been combined.

The R404A data provides basic values.

For performance data of other operating conditions, please refer to the GEA Bock software.

With frequency converter operation (infinite speed/output regulation via frequency converters), the max. possible frequency can be taken from the GEA Bock software.

* PW = Part Winding, motors for part winding start

1 = 1. part winding 2 = 2. part winding

Explanations:

① Further explanations and technical data see brochure
“semi-hermetic GEA Bock compressors”.

④ 380-420 V Y/YY - 3 - 50 Hz PW

PW = Part Winding, motors for part winding start

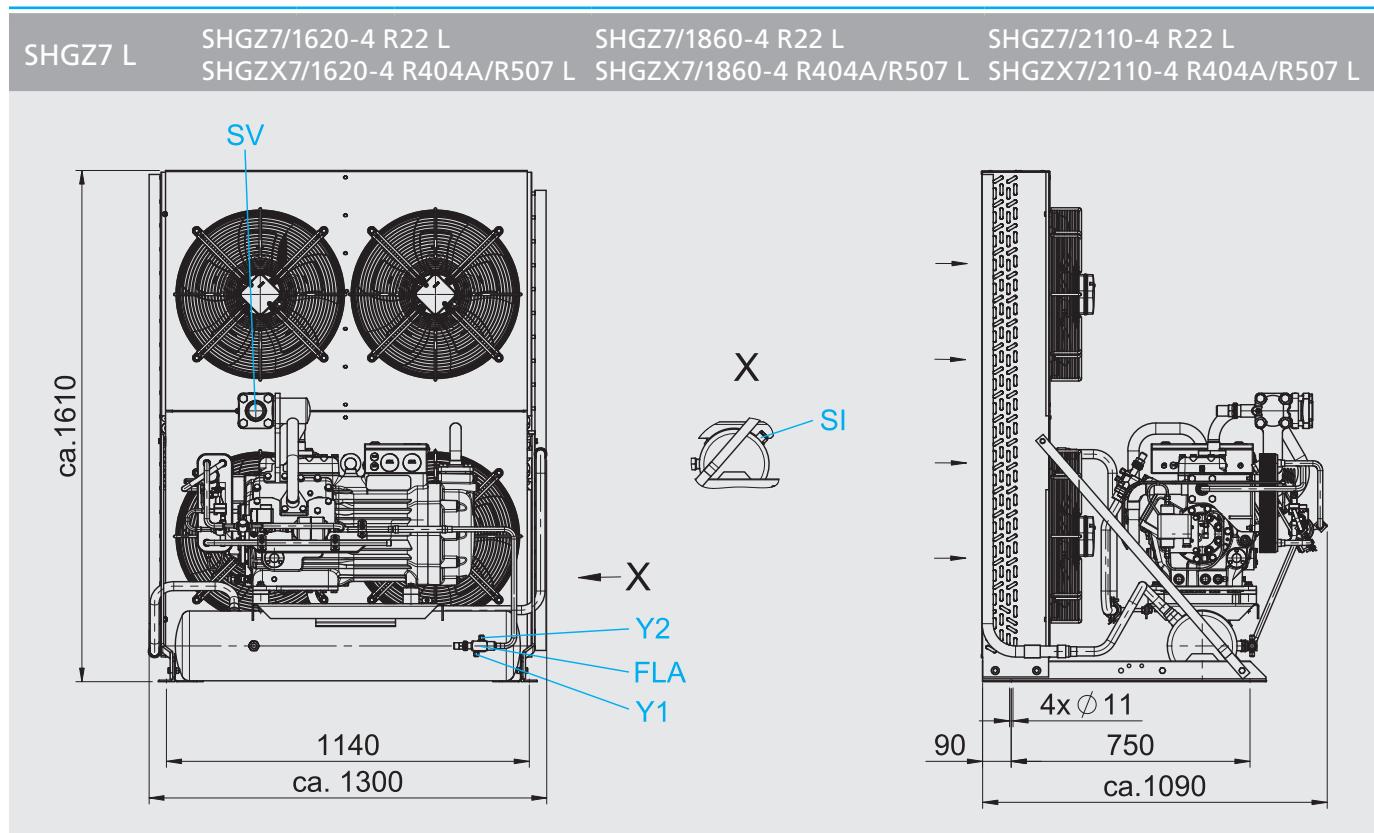

(no start unloaders required)

- Winding ratio: 60% / 40%

② Tolerance ($\pm 10\%$) relates to the mean value of the voltage range. Other voltages and current types on request.

⑤ 230 V - 1 - 50 Hz

③ With liquid temperature at 20 °C and 90 % capacity

Further compressor connections can be found in the brochure "semi-hermetic GEA Bock compressors"

① Further compressor connections can be found in the brochure "semi-hermetic GEA Bock compressors"

Scope of supply

Semi-hermetic two-stage GEA Bock compressor HGZ with suction gas-cooling 380-420 V Δ/YYY - 3 - 50 Hz

Condensers with copper pipes and aluminium plates, optimized circulation, improved heat transmissions and extended plate surfaces

Liquid subcooler, reinjection valve, solenoid valve 230 V - 1 - 50/60 Hz, two sight glasses, filter drier, directly mounted onto the compressor, fully assembled and insulated with pipes ready for connection

Fan with exceptionally quiet and economical external rotor motor single-phase, suitable for speed regulation

Generously proportioned liquid receiver tested for type examination

Sight glass with spherical insert

Liquid outlet - Rotalock shut-off valve with adjustable spindle seal, brazed adapter and connections for speed control and service

Stable attachment for discharge line

Rubber anti-vibration pads

Rubber plates for installation of the unit

Accessories

Oil separator

High and low pressure switch (mounted)

Safety valve for liquid receiver (mounted)

Fan three-phase

Semi-hermetic GEA Bock compressors

Compressor units with receiver

With the current series of units, GEA Bock offers you compressor units with receivers with displacement from 5,4 to 122,4 m³/h.

The Pluscom generation compressors are used in the low and middle performance range.

All GEA Bock units are constructed according to a continuous "module" principle.

Our solutions are customer-oriented and user-friendly, because they are low-priced, energy-efficient, long-lasting and tailored to your individual needs.

Special features:

Universal

Wide range of uses (R134a, R404A, R507, R407C, R22) for air-conditioning, normal refrigeration and deep-freezing.

Two compressor variants

- HG design with suction gas-cooling
- HA design with air-cooling—particularly advantageous for deep-freezing refrigeration (R22, R404A)

Reliable and safe oil supply

All compressors are fitted with classic lubrication oil circulation and an oil pump which is independent of the direction of rotation.

* PW = Part Winding, motors for part winding start

1 = 1. part winding 2 = 2. part winding

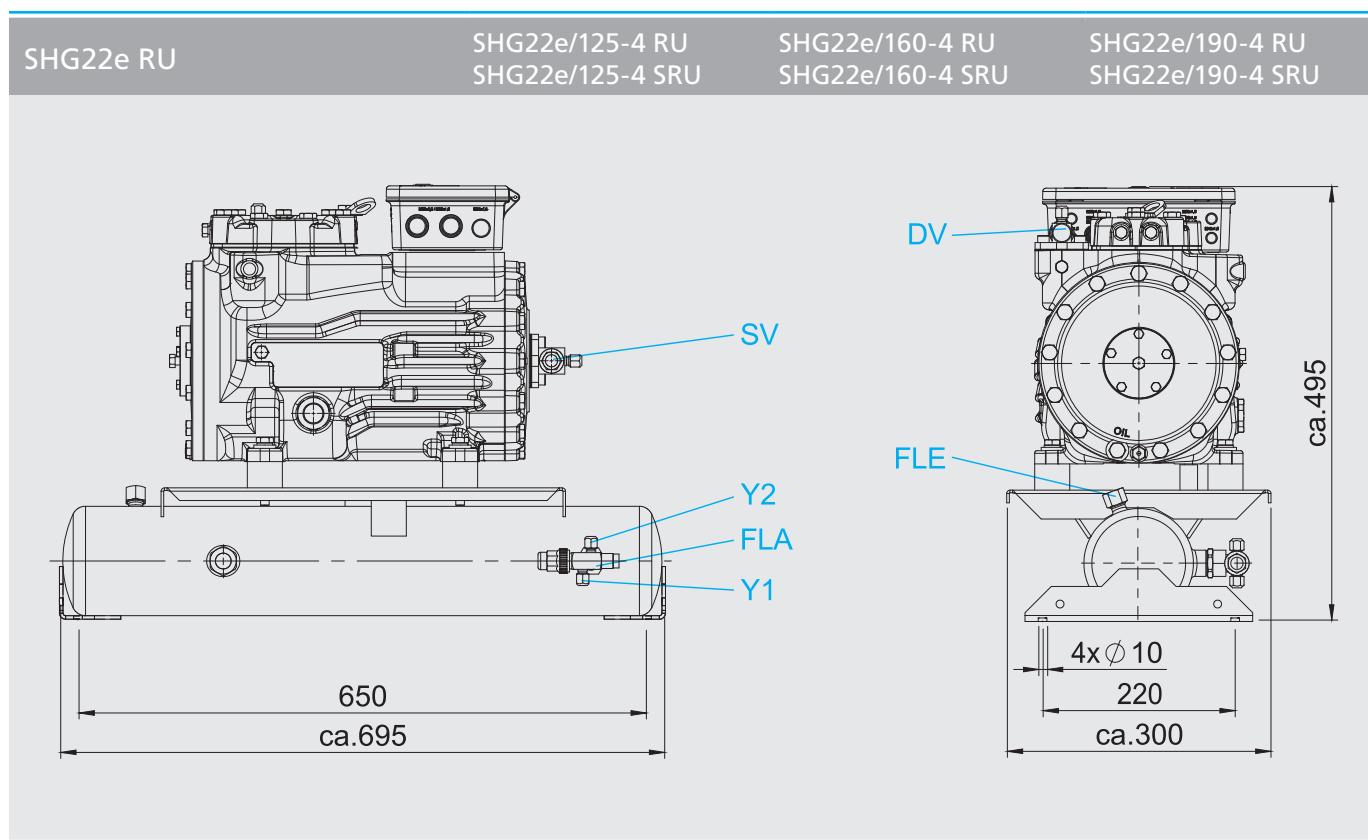

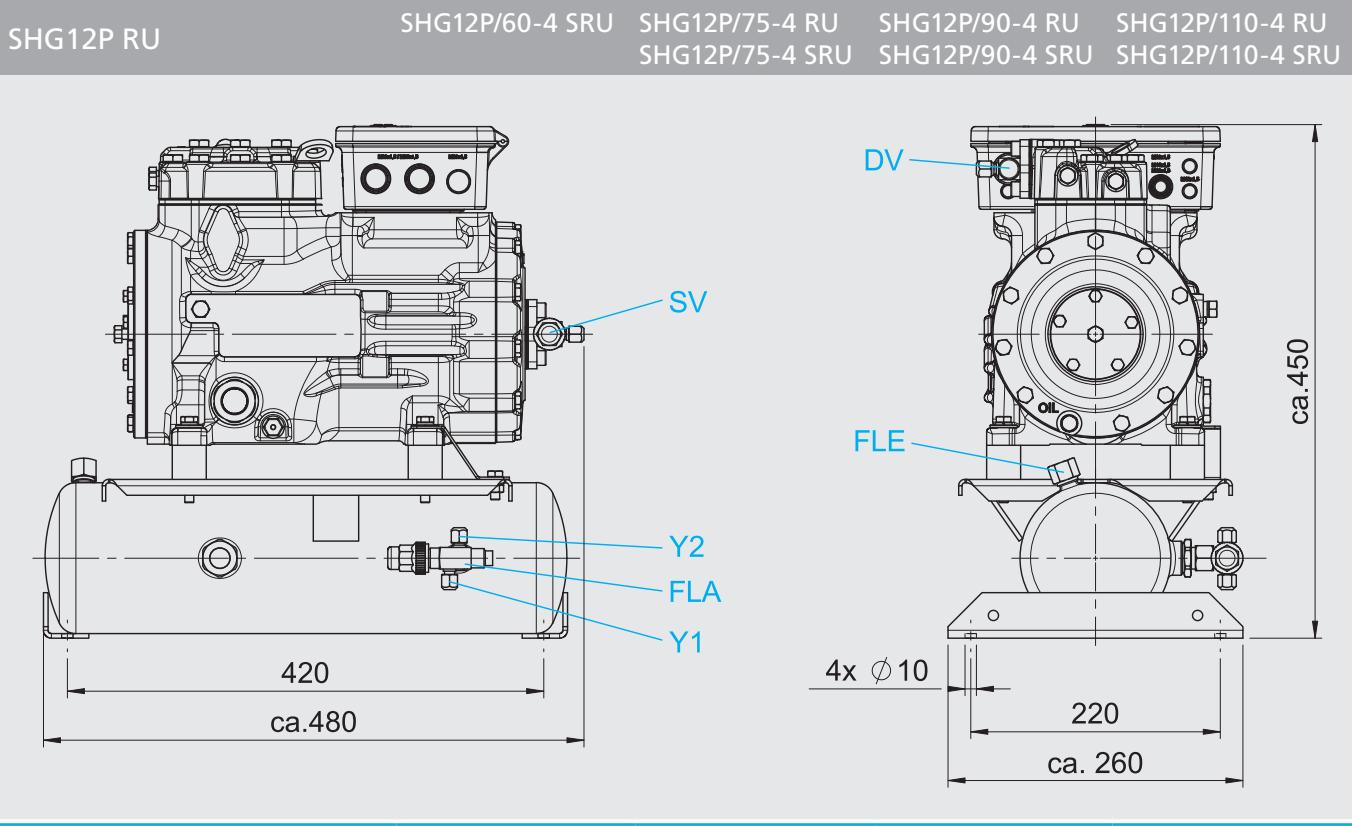

Explanations:

① Further explanations and technical data see brochure
"semi-hermetic GEA Bock compressors"

② Tolerance ($\pm 10\%$) relates to the mean value of the voltage range. Other voltages and current types on request.

③ 220-240 V Δ / 380-420 V Y - 3 - 50 Hz
265-290 V Δ / 440-480 V Y - 3 - 60 Hz

④ 380-420 V Y/YY - 3 - 50 Hz PW
440-480 V Y/YY - 3 - 60 Hz PW
PW = Part Winding, motors for part winding start
(no start unloaders required)
- Winding ratio:
SHG(SHA)4, SHG(SHA)5, SHG(SHA)6 = 66% / 33%
- Designs for Y/Δ on request

Scope of supply

Semi-hermetic GEA Bock compressors
 HG with suction gas cooling or
 HA with air-cooling (deep-freezing R22, R404A)

Generously proportioned liquid receiver (horizontal)
 (from 14 ltr. tested for type examination)

Liquid inlet angle adapter in brazed design

Liquid outlet Rotalock shut-off valve with adjustable spindle seal, brazed adapter and service connections

Option of connecting safety valve (from 14 ltr.)

Sight glass with spherical insert

Rubber anti-vibration pads

Rubber plates for installation of the unit

Accessories

- ① Oil separator
 - ② High and low pressure switch (mounted)
 - except SHG(SHA)6 RU
 - ③ Safety valve for liquid receiver (from 14 ltr.)
 - ④ Capacity regulation with EFC (Electronic Frequency Control)
 Continuously variable speed control using frequency converter technology for Pluscom compressors (no picture)
- Further accessories can be found in the brochure
 "semi-hermetic GEA Bock compressors".

Accessories

We live our values.

Excellence • Passion • Integrity • Responsibility • GEA-versity

GEA Group is a global engineering company with multi-billion euro sales and operations in more than 50 countries. Founded in 1881, the company is one of the largest providers of innovative equipment and process technology. GEA Group is listed in the STOXX® Europe 600 index.
